

PARTNER HIGHLIGHT

Pier One Polymers

Pier One Polymers, Inc. was established in 1999 by owner Michael Pier when he decided to take his nearly 20 years of plastics experience to work for himself. Mr. Pier's plastics career began in 1980 in compounding and led him to positions in molding, R&D, and then into management. As a plant engineer in the early 1990s, he was a key asset in the design and layout of the expansion into the 200,000 square foot facility that is now being operated by another nylon producer in Ohio. He then took his knowledge to a Michigan compounder as the plant manager and helped grow that company through expertise and innovation while developing new formulations to utilize the ever growing nylon market. Over the past 15 years, **Pier One Polymers** has continued to stay current with the ever changing technologies and innovations to improve upon the recycled content lines and expand into more prime products. Today, our trademark **Maxamid** nylons provide a full line of 6 and 66 products with both prime and recycled content.

Product	Based Resin	Reinforcements
<i>MAXAMID</i> ®	PA6, PA66, PA12, PA612	<i>unreinforced, glass, glass/mineral, additive packages</i>
<i>MAXATEL</i> ®	Acetal (POM)	<i>unreinforced, glass, glass/mineral, additive packages</i>
<i>PEXTIN</i> ™	PBT	<i>unreinforced, glass, glass/mineral, additive packages</i>
<i>PEXLOY</i> ™	PC/PBT	<i>unreinforced, glass, additive packages</i>
<i>PERBLEND</i> ™	PC/ABS	<i>unreinforced, glass, additive packages</i>
<i>Other Products on request</i>	ABS, PC	unreinforced, glass

Pier One Polymers

Our Capabilities

With over 50 combined years of formulating experience, we have the knowledge and expertise to formulate to solve most any problem. Utilizing both single screw and twin screw technology, we can custom formulate using the proper equipment for the job at hand to ensure the best results. We embrace new challenges and draw from a large arsenal of reinforcements, fillers, stabilizers, antioxidants, impact modifiers, internal and external lubricants to meet the needs of even the most demanding applications. With a large inventory of finished product and raw feedstocks, we can provide same day shipping on standard products and quick turnaround times for new orders. These characteristics and abilities are what sets us apart from our competition.

Pier One Polymers is an ideal partner for any sized application because we are big enough to support large volume programs but small enough to treat the smaller applications with the same passion. We package material in 55 lb. bags, 1,500 lb. boxes and all the way up to bulk trucks. We feel that we are not just a vendor to our customers, but really a partner with them. If you give us the opportunity, we will provide the type of quality, support, and service that you deserve from a vendor who is partnering with you to ensure your success.

We build and maintain inventory per our customer needs to ensure material is always available for their ongoing needs. Once we launch a program for a customer, we make sure to stock beyond their needs to deal with any unforeseen requirements that may come up. With an average of 2,000,000 lbs. of inventory on hand at all times, we not only stock for customers' current needs, but likely have the material you are looking for before you know you need it.

Made in North America

Maxamid® is produced in Michigan, USA utilizing a US manufacturers base resin. Pier One Polymers strives to utilize USA manufactured additives, reinforcements, and stabilizers in it's products.

Pier One is striving to become globally positioned to export Maxamid products worldwide.
